Document Information

	Information
Project Name	Zigbee Test Package Error Tool
Document ID	[Document Management System #]
Document Owner	IoT - Dien Quang
Document status DRAFT PENDING APPROVAL APPROVALED FINAL (READ ONLY) CANCELLED	DRAFT
Last Saved Date	21 June 2022

Document History

Time	Version	Name	Information		
01 April 2022	1.0.0	hoangnn@dienquang.com	First version		
05 April 2022	1.0.1	hoangnn@dienquang.com	Update communication Range of Zigbee Product and write guide		
06 April 2022	1.0.1	hoangnn@dienquang.com	Update FW module		
21 June 2022	1.0.2	hoangnn@dienquang.com	Fix error crash app		

Document Approvals

Technical writers	hoangnn@dienquang.com		

Contents

I. Communication Range of Zigbee Product

1. Test preparation

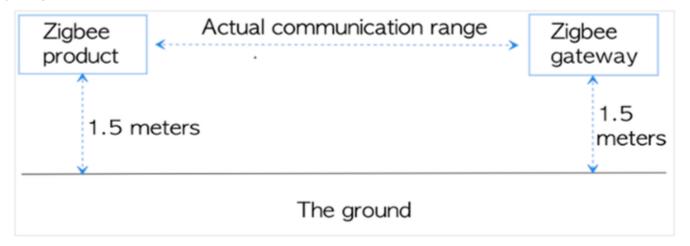

Device	Decription	
Zigbee Product	Zigbee Product under test (Referred to as product hereinafter)	
Power	DC 5V Output	
Laptop Computer	Packets capture software is required	

2. Test principle

Assess the maximum communication range by the success rate of data reporting.

Important: Factors like weather temperature and humidity might cause variation of the medium between the product which might affect the test result

3. Test Condition

4. Placement of product

Updating...

II. Evaluate result Test

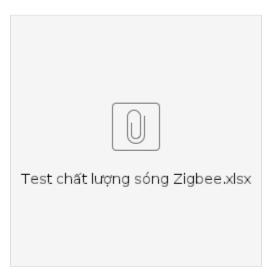

- 1. Scope: Test at DIEN QUANG office within a distance of 5 -10 m (Condition: % per error packet < 1 and LQI > 70, Time = 1 minutes)
- 2. Data record:
- Update 04 April 2022

KHOẢNG CÁCH ~10m (Thời gian 1 phút) nguồn DC = 5V - 2A					
Số lần test	% per error packet	LQI	Chi tiết	Ghi chú	Version PCB
1	0.3%	108	16402 16438 0.3% 0.0% 3 108 *	PASS	
2	0.1%	114	* 18284 18288 0.1% 0.0% 3 114 *	PASS	V2.2
3	0.9%	105	17006 17147 0.9% 0.0% 3 105 *	PASS	
		KHC	DẢNG CÁCH 5m (Thời gian 1 phút) nguồn DC = 5V - 2A		
1	0.1%	114	18514 18528 0.1% 0.0% 3 114 *	PASS	
2	0.1%	123	18971 18972 0.1% 0.0% 3 123 *	PASS	V2.2
3	0.1%	117	18994 18994 0.0% 0.0% 3 117 *	PASS	

Update 05 April 2022

KHOẢNG CÁCH ~10m (Thời gian 1 phút) nguồn DC = 5V - 2A					
Số lần test	% per error packet	LQI	Chi tiết	Ghi chú	Version PCB
1	0.0%	126	18802 18802 0.0% 0.0% 3 126 *	PASS	V2.2
2	0.0%	117	18466 18466 0.0% 0.0% 3 117 *	PASS	
3	0.1%	126	18623 18624 0.1% 0.0% 3 126 *	PASS	
			KHOẢNG CÁCH 5m (Thời gian 1 phút) nguồn DC = 5V - 2A		
1	0.1%	120	18340 18348 0.1% 0.0% 3 120 *	PASS	V2.2
2	0.4%	102	17196 17263 0.4% 0.0% 3 102 *	PASS	
3	1.8%	93	17036 17335 1.8% 0.0% 3 93 *	FAILED	
4	0.7%	114	17226 17345 0.7% 0.0% 3 114	PASS	

\rightarrow Link file :

ightarrow Conclude : The environment that affects the sensitivity of Zigbee should consider performing testing at Dien Quang factory.

III. Test Package Error Tool Guide

• Link application:

• Link FW:

Function: This is the tool to evaluate communication quality that measure PER (i.e packet error rate)

- The tool allow you check the signal range, the impact of obstacles, and the communication quality of the location where the terminal is located.
- Main Interface of Application

This interface include: Version tab information and help tab with evaluates about error packet, LQI of Zigbee.

Step of Test:

• Select TAI LAI (W) which get COM Port

• Set the parameters of LQI and test time in the Thiết lập thông số. Click Luru to save the information

• Click BÁT ĐẦU (W) to test . Information about %packet error and LQI will display as below:

• The results will be displayed on the interface

In case the device does not meet the requirements

• Note: If click BÁT ĐẦU (Q) but time not run please check connect Slave or cable
